

Accounting/Financial Manager

Information about the company

One of the largest challenges in the maritime industry is to develop energy efficient measures to reduce fuel cost and air emissions, as well as to enhance the safety of ships/cargoes when sailing at sea. It is well-known that weather routing and voyage optimisation are two of the most efficient solutions, while today the two concepts require further research and innovative developments to deliver high quality services to solve those challenges. ONL currently develops a sail plan service combining these two concepts. At ONL we are developing solutions using Earth observations to provide more reliable forecasts of weather and sea environments to the sail plan system.

ONL's mission is to become the World's leading provider of voyage and route planning systems. ONL shall provide the most accurate and advanced navigation system for worldwide maritime use. It enables greater fuel optimisation to support a more sustainable global maritime transport sector. ONL develops innovative route planning services based on the SpaceNav (Space Based Maritime Navigation) system. The SpaceNav concept consists of a route plan that guides vessels how to efficiently sail from one port to the next. The system contains unique observational capabilities and computational models based on space-born data to calculate the route for the vessels to follow. This in turn results in a safer and more economical execution of maritime and offshore operations. It helps to improve the efficiency of vessels and their safety, the marine environment and the working environment for the crew.
